- **Saves Time and Resources**

Through the Fax Referral Program, you refer patients to an evidence-based resource, the Quit Line, for a comprehensive tobacco cessation intervention. This allows you and your staff to spend time and resources on other health issues.

- **Creates a Moment of Opportunity**

The Fax Referral Program allows you to take action with your patient at the time of the visit. If your patients are interested in quitting, you can have a big impact on their success by referring them to a cessation resource you trust.

- **Ensures Proactive Follow-Up**

Using the fax referral ensures that an appropriate follow-up step will be conducted by the Quit Line after your visit with the patient has concluded.

- **Eliminates Barriers**

Through the Fax Referral Program, the Quit Line will call your patients who are hesitant about calling on their own to begin services. This eliminates a barrier that many of your patients have.

- **Provides You with an Outcome Report**

The Quit Line will send you a "Fax Back Report" detailing the result of the phone outreach. You can use the report to facilitate your follow-up care with your patient.
